What is AI and Why Should We Be Concerned?

- Artificial Intelligence (AI) refers to machines and software that can perform tasks that normally require human intelligence
- AI is used in healthcare, education, banking, social media, and daily apps like Google and Siri - AI is growing fast ➤
- but so are its risks Why is it Important to Discuss the Negative Sides?
- AI affects millions of people every day
- Its misuse can cause serious harm to society - Understanding risks helps us use AI responsibly

Types of Negative Impacts of AI

social risk

- Job loss / unemployment
- Bias and discrimination
 - Addiction to AI tools
 - Loss of human connection

TECHNICAL RISKS

- System errors & failures
- Cybersecurity threats
- AI making wrong decisions
- Lack of explainability

How Does AI Cause Problems?

Step 1 → AI is trained on biased or incomplete data It learns and repeats those biases Step

2 → AI makes decisions without human emotion No empathy, no moral judgment Step

3 → AI is used by companies to collect user data Privacy is violated without full consent Step

4 → AI automates jobs done by humans Workers lose employment opportunities Step

5 → AI-generated content spreads online Fake news and deepfakes become difficult to detect

Real-Life Examples of AI Gone Wrong

Amazon HR Tool → AI rejected female job applicants because it was trained on male-dominated data

Facebook → AI algorithm promoted hate speech and misinformation for higher engagement

ChatGPT / AI → Students using AI to cheat in exams Academic dishonesty is rising globally

Deepfakes → Fake videos of real people created Used for fraud, blackmail, and fake news

Self-Driving Car → Tesla autopilot accidents reported AI misjudged road situations

The Two Sides of AI

ADVANTAGES

- Increases efficiency
 - Available 24/7
 - Processes data very fast
 - Reduces human error
 - Useful in medicine/research

DISADVANTAGES

- Eliminates human jobs
- No emotional intelligence
- Can be biased or unfair
- Privacy and data risks

Negative Impacts of AI — Survey Data

Negative Impacts of AI — Global Concern Survey (2023)		
Category	Percentage (%)	Description
Worried about AI privacy invasion	72	Users concerned about data collection by AI systems
Concerned about job loss due to AI	67	Workers afraid of being replaced by automation
Concerned about AI in weapons/warfare	61	People worried about autonomous AI weapons
Encountered AI-generated misinformation	55	Users who faced deepfakes or AI fake news
Believe AI has racial or gender bias	49	People who think AI decisions are unfair or biased
Source: Global AI Impact & Public Concern Survey, 2023		

Job Displacement Growth Potential (In Millions)

Negative impact cycle of AI

What Does the Chart Tell Us?

- 72% are worried about AI invading their privacy
 - Data collection by AI is the top concern globally - 67% fear losing their jobs because of AI
- Automation is replacing human workers rapidly - 61% are concerned about AI being used in warfare
- AI weapons are seen as a serious global threat - 55% have encountered AI-generated misinformation
 - Deepfakes and fake news are already widespread - 49% believe AI systems show bias
- AI reflects the unfairness in its training data

The majority of people are already experiencing or fearing the negative effects of AI in their daily lives.

Key Takeaways

What We Learned: - AI has serious negative sides that cannot be ignored

- Job loss, bias, privacy invasion, and misinformation are real and growing problems
- AI has no moral judgment
 - humans must stay in control
- Regulation and ethical guidelines are urgently needed

Why This Topic Matters:

- AI is already part of everyone's daily life
- Its risks affect jobs, safety, fairness, and freedom
- Understanding AI's dark side helps us use it wisely

AI is only as good as the humans who build and control it. Without responsibility, intelligence becomes dangerous.
